Profile Summary

Senior React Native Developer with 7+ years of experience building high-performance mobile apps across iOS and Android, specializing in native modules, real-time ML integration, and cross-platform architecture

Skills

Languages: JavaScript, TypeScript, Swift, Java

Technologies: React Native, Expo, Expo Router, Expo EAS, React, Next.js, Redux, Zustand, React Query, Jest, Firebase, REST API, Git, CI/CD

Experience

Sr. React Native Developer & Team Lead, iTechnolabs Pvt. Ltd. – Mohali, Punjab Aug 2022 – present

- Led and mentored 12+ developers in Agile sprints, establishing TypeScript-first coding standards and code review practices that reduced production bugs across all team projects
- Integrated Google's MediaPipe PoseLandmark model for real-time human pose estimation in a fitness app, achieving 95% pose accuracy across 33 body landmarks
- Architected a Turbo Module for human pose detection supporting React Native's New Architecture, and extended Expo compatibility via a custom config plugin
- Created a production-ready React Native boilerplate (Expo SDK 57) featuring TypeScript, Expo Router, Zustand, TanStack Query, i18n, ESLint, Prettier, and Husky pre-commit hooks
- Built a high-performance POS system using React Native and Next.js with real-time inventory sync, barcode scanning, and cross-platform support
- Accelerated app startup by 20% by adopting React Native's bridgeless architecture and cut project setup time by 30% via Expo migration
- Automated iOS and Android builds and store submissions using Expo EAS, streamlining CI/CD release pipelines for App Store and Google Play
- Resolved critical Google Maps integration bugs, cutting client API costs by 40% and preventing billing overcharges

Sr. React Native Developer, Suffescom Solutions – Mohali, Punjab Oct 2021 – Aug 2022

- Led a team of 7 developers, implementing React Native coding standards and PR review workflows that improved code consistency and reduced merge conflicts
- Created an Android native module enabling background tasks with 99.9% reliability
- Built a food delivery app serving 1,000+ users, implementing real-time tracking and payments via WebSockets and Maps
- Resolved subscription validation loopholes by implementing server-side receipt verification, achieving 100% compliance with single-user license policies

Junior iOS Developer & React Native Developer, Immanent Solutions – Mohali, Punjab Sept 2018 – Oct 2021

- Built 4 mobile apps across event, education, social, and crypto sectors, serving 1,000+ users on iOS and React Native
- Implemented HMAC-based API authentication across all apps, achieving 100% security audit compliance and eliminating unauthorized access
- Reduced development time by 40% by migrating native iOS codebases to React Native

Open Source

expo-check-installed-apps

Expo config plugin to detect installed apps on Android and iOS (279.4K+ downloads)

- Created an Expo module enabling developers to query device-installed apps for feature gating
- Implemented automatic native code injection via Expo config plugin, supporting SDK 51+ with zero manual setup

react-native-mediapipe-posedetection

Real-time pose detection for React Native using MediaPipe BlazePose with GPU acceleration (11.3K+ downloads)

- Built a high-performance native module supporting 33 pose landmarks with ~15 FPS real-time detection
- Implemented GPU-accelerated inference for iOS and Android using Vision Camera frame processing

Projects

Elevyn - AI Fitness

AI-powered fitness app with personalized workouts, meal planning, and calorie tracking

- Integrated Google's MediaPipe PoseLandmarker for on-device human pose estimation, enabling real-time workout form analysis across 33 body landmarks
- Built an AI-driven engine generating personalized workout and meal plans based on user body metrics, increasing user engagement by 35%
- Implemented camera-based meal scanning to auto-detect macros and calories, streamlining food logging and improving daily tracking consistency by 40%

Focusbear - ADHD

Productivity app helping users block distractions and build healthy habits

- Built native modules for Android (distraction-blocking overlay) and iOS (Screen Time API), reducing screen-time on blocked apps by 50%
- Developed a scheduled app-blocking feature using AlarmManager and BGTaskScheduler, enabling automated distraction-free intervals
- Deployed a structured log file system to capture errors and crashes, reducing average bug resolution time by 50%
- Implemented offline API caching with automatic sync, maintaining app functionality during network outages

Swivics

Corporate mobility platform streamlining employee commutes via automated scheduling

- Architected a corporate mobility platform using Expo, supporting automated scheduling and recurring ride management for employee transportation
- Designed a resilient background location service that bypasses Android Doze mode and OEM battery optimizations, achieving 100% tracking uptime
- Created stutter-free map animations using custom coordinate interpolation for driver markers, delivering smooth real-time location updates
- Implemented permission handling flows to secure 'Always Allow' location access, resolving background execution failures across Samsung, Xiaomi, and Oppo devices

JOBR - POS

Point of Sale system for service management

- Built a custom calendar module for service scheduling with drag-and-drop support
- Integrated Apple's Tap to Pay SDK for contactless NFC transactions, eliminating the need for external card readers
- Created a digital wallet module for JOBR coins to facilitate in-app transactions
- Built a companion web app using Next.js with shared business logic, enabling consistent cross-platform functionality

Education

Sri Sukhmani Institute of Information & Technology, B.Tech in Computer Science

Nov 2019
